

Treasury.Protocol

WHITEPAPER

Our Mission

Our Mission at Treasury.Protocol is to be a pioneer the world's first intrinsic base value token. At its core, Treasury.Protocol aims to redefine the paradigm of token valuation by harnessing not only the power of Liquidity Pools but also leveraging an innovative concept known as the Open Treasury.

This whitepaper will delves into the principles, technology, and our vision driving this ambitious endeavor and how to achieve it.

"Traditional cryptocurrencies sometimes derive their value primarily from speculative trading and market sentiment, leading to volatile price fluctuations detached from underlying fundamentals. Unlike stocks, which represent ownership in companies with tangible assets, revenue streams, and infrastructure, cryptocurrencies often lack intrinsic value tied to real-world assets or revenue-generating activities.

In contrast, Treasury.Protocol seeks to revolutionize this paradigm by anchoring its token's value to other valuable crypto assets, which in this case are Solana and the Print Protocol. And with brewing conversation about tokenizing stocks, it's not impossible that in the future, Treasury.Protocol will also have stocks or other real-world assets in its portfolio."

How Open Treasury Works?

Thanks To Print Protocol and its inhouse technology of auto tax system, Treasury.Protocol will also have 6% tax on its transaction, in wich we will allocate it as this list below.

*Tax Allocation (7%) :

- 1% for Liquidity Pool (LP)
- 1% for Marketing
- 1% for Daily buyback
- 4% for the Treasury (for Solana USDT and for Print Protocol)

We allocate 1% of our taxes to purchase Print Protocol and reserve 1% in Solana. As the prices of Print Protocol and Solana increase, our Treasury holdings appreciate. We strategically trade, stake and utilize a flexible portion of our Solana to buyback our native token, and burn it.

Additionally, we utilize 100% of the tax rewards obtained from holding Print Protocol to conduct buybacks and burn our native token.

Furthermore, the intrinsic value of our token increases as liquidity pools accumulate and our Treasury reserves expand, while the token supply steadily decreases.

*Percentage of Taxes and allocation are still subject of change

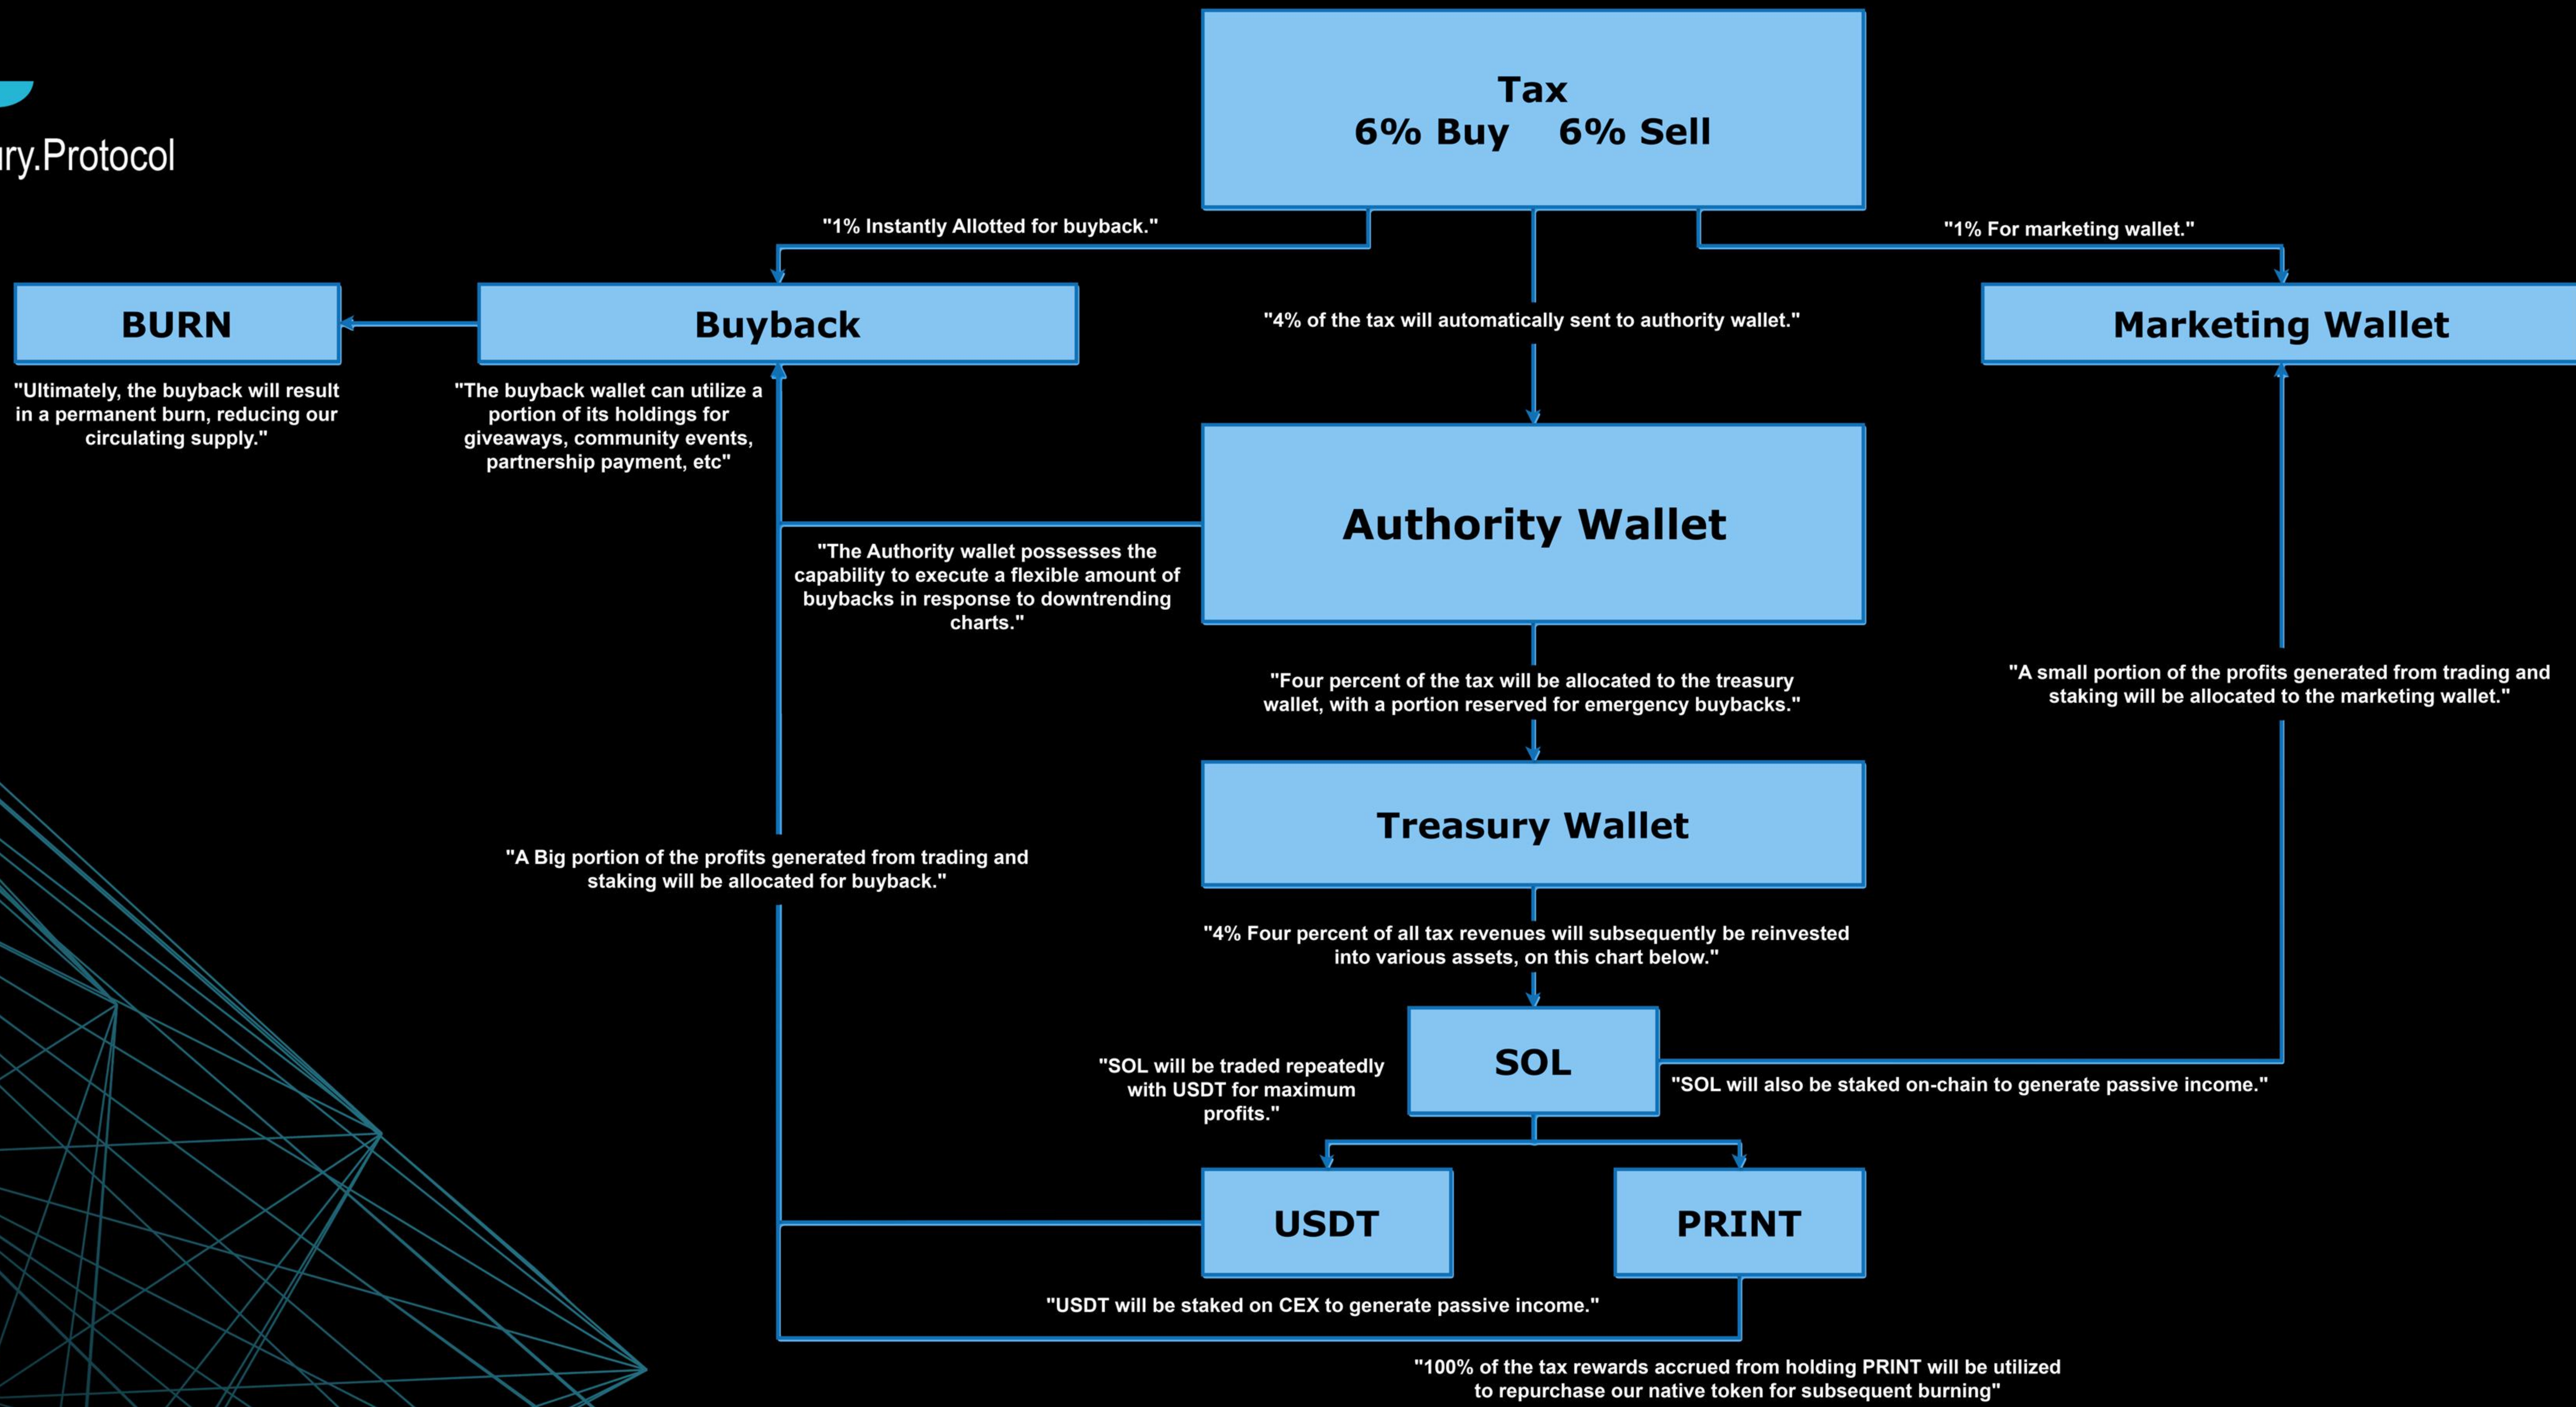

Treasury.Protocol

Our Roadmap

- 10% supply allocated for presale LP.
- Initiate social media platform.
- Communal activities & giveaways
- Initiate and improve our website.
- real time update on website or our Telegram group for every executed burn or buyback transaction.
- Early on after we launch, we will choose a few of our community members to be our honorary members, in which they will become mediators between the community and developers. (We will ask permission from our community before executing any strategic trades on our open treasury portfolio.)
- Marketing with crypto influencers.
- Tax allocation re-arranged into more buyback fund.
- Weekly audit of our treasury's worth.
- Stable Coin added into open treasury.
- 3rd party treasury auditor.
- SPL Warrant Token
- Daily updates on X Space.
- Weekly burn.
- CEX listing.
- Community event.
- Treasury DAO
- Annual treasury purge (wipe our stable assets from our portfolio to buy back the chart and burn it).
- Continual Marketing and expansion.

Token Detail

10.000.000.000 Total Supply

7% tax on buys
1% for Liquidity Pool
4% for Treasury
1% for daily buyback
1% for marketing

7% tax on sells
1% for Liquidity Pool
4% for Treasury
1% for daily buyback
1% for marketing

*Tax percentage and allocation is still subject of change.
